# HOORVIA - WATER HEATER FLUSH: PRINTABLE STEP GUIDE

Quick Reference Cheat Sheet · A4 Printable

**Home, Family & Health · Sheet #1**

| Step | What To Do | How | Note |
|---|---|---|---|
| **Turn off power / gas** | Cut the energy supply | Breaker off or gas to pilot | Never drain with power on |
| **Turn off water supply** | Close the cold-water valve | Valve on top of the heater | Stops refilling |
| **Let it cool** | Wait 2-4 hours | Water must be safe to touch | Scalding risk |
| **Attach a hose** | Connect to the drain valve | Garden hose to a floor drain | Hot water will flow out |
| **Open a hot tap** | Open a faucet upstairs | Relieves pressure | Lets air in so it drains |
| **Open the drain valve** | Turn the valve | Water flows out the hose | Watch for sediment |
| **Flush until clear** | Let it run | Drain fully, then flush with cold water | Sediment comes out brown |
| **Close the drain valve** | Turn it off | Remove the hose | Check for leaks |
| **Turn on water supply** | Open the cold-water valve | Tank refills | Wait until the tap runs steady |
| **Check for leaks** | Inspect valves and fittings | Wipe and watch | Tighten if dripping |
| **Turn power / gas back on** | Restore energy | Breaker on or gas to on | Only after the tank is full |
| **Test the water** | Run a hot tap | Water heats in 30-60 min | Check the temperature |

**PRO TIP:** Never power on an empty tank: Turning the power or gas back on before the tank is full burns out the heating element in seconds. Fill the tank first, then restore power.
