HOORVIA - SQL WINDOW FUNCTIONS: PRINTABLE GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Function	Syntax	What It Does	Example
ROW_NUMBER	ROW_NUMBER() OVER (ORDER BY col)	Numbers rows 1, 2, 3...	Top-N per group
RANK	RANK() OVER (ORDER BY col DESC)	Ranks with gaps for ties	Leaderboards
DENSE_RANK	DENSE_RANK() OVER (ORDER BY col)	Ranks without gaps	Top-N without gaps
NTILE	NTILE(4) OVER (ORDER BY col)	Splits rows into N groups	Quartiles, deciles
LAG	LAG(col, 1) OVER (ORDER BY date)	Previous row's value	Month-over-month change
LEAD	LEAD(col, 1) OVER (ORDER BY date)	Next row's value	Next order date
SUM (window)	SUM(col) OVER (PARTITION BY grp)	Running / cumulative total	Running totals
AVG (window)	AVG(col) OVER (PARTITION BY grp)	Average within a group	Group averages
COUNT (window)	COUNT(*) OVER (PARTITION BY grp)	Count within a group	Rows per group
FIRST_VALUE	FIRST_VALUE(col) OVER (ORDER BY date)	First value in a window	First order per customer
LAST_VALUE	LAST_VALUE(col) OVER (ORDER BY date)	Last value in a window	Latest status
PARTITION BY	... OVER (PARTITION BY col)	Resets the window per group	Per-department ranking

PRO TIP: PARTITION BY is the grouper: PARTITION BY splits the rows into groups and the function restarts in each one. Without it, the window is the whole result.
