HOORVIA - XLOOKUP GUIDE: PRINTABLE EXCEL FORMULA CHART

Quick Reference Cheat Sheet · US Letter Printable

Tech & Software · Sheet #1

Use Case	Formula	What It Does	Note
Basic lookup	=XLOOKUP(A2, B:B, C:C)	Finds A2 in column B, returns C	Exact match by default
With fallback	=XLOOKUP(A2, B:B, C:C, "Not found")	Returns text if missing	No more #N/A
Look left	=XLOOKUP(A2, C:C, B:B)	Searches right, returns left	VLOOKUP cannot do this
Last match	=XLOOKUP(A2, B:B, C:C, , , -1)	Searches from the bottom	Finds the latest entry
Wildcard match	=XLOOKUP(A2, B:B, C:C, , 2)	Matches with * and ?	Partial text search
Approximate (smaller)	=XLOOKUP(A2, B:B, C:C, , -1)	Next smaller value	Price tiers, tax bands
Approximate (larger)	=XLOOKUP(A2, B:B, C:C, , 1)	Next larger value	Thresholds
Two-way lookup	=XLOOKUP(A2, B:B, XLOOKUP(A3, C1:Z1, C:Z))	Row + column match	Nested XLOOKUPs
Return a whole row	=XLOOKUP(A2, B:B, C:Z)	Returns the entire row	Spills across columns
Multiple criteria	=XLOOKUP(1, (B:B=A2)*(C:C=A3), D:D)	Matches two conditions	Boolean arrays
With IFERROR	=IFERROR(XLOOKUP(...), 0)	Returns 0 on missing	Safe for sums
Horizontal lookup	=XLOOKUP(A2, B1:Z1, B2:Z2)	Searches across a row	Replaces HLOOKUP

PRO TIP: Always add the fallback: A missing value without a fallback returns #N/A. Add the fourth argument - a text message or a zero - and the formula never errors.
