HOORVIA - TURKEY TEMPERATURE & ROASTING TIME CHART (BY WEIGHT)

Quick Reference Cheat Sheet · US Letter Printable

Kitchen & Cooking

Whole Turkey - Breast		
Pull From Oven At	**Final Rested Target**	**Exact Thermometer Probe Location**
157°F-160°F / 70°C	165°F / 74°C	Insert from neck/side parallel to breastbone into deepest lobe

Whole Turkey - Inner Thigh		
Pull From Oven At	**Final Rested Target**	**Exact Thermometer Probe Location**
170°F-175°F / 78°C	180°F / 82°C	Thickest pocket between drumstick & body (do not touch bone!)

Center of Cavity Stuffing		
Pull From Oven At	**Final Rested Target**	**Exact Thermometer Probe Location**
165°F / 74°C (Strict)	165°F+ / 74°C+	Dead center of stuffing mass (Must hit 165°F / 74°C before pulling)

Bone-In Turkey Breast Crown (6 lb)		
Pull From Oven At	**Final Rested Target**	**Exact Thermometer Probe Location**
158°F-160°F / 70°C	165°F / 74°C	Roast 1 ½ to 2 ¼ hrs at 350°F / 177°C; rest 15 minutes

Boneless Turkey Breast Roast (3 lb)		
Pull From Oven At	**Final Rested Target**	**Exact Thermometer Probe Location**
160°F / 71°C	165°F / 74°C	Roast 1 ¼ to 1 ½ hrs at 350°F / 177°C; rest 10 minutes

Smoked Whole Turkey (at 250°F / 121°C)		
Pull From Oven At	**Final Rested Target**	**Exact Thermometer Probe Location**
160°F / 71°C Breast / 175°F / 79°C Thigh	165°F / 74°C / 180°F / 82°C	Estimate 30 min per pound; crisp skin at 400°F / 204°C last 15 min

PRO TIP: Cooking a whole turkey presents a classic thermodynamic problem: the lean, exposed breast sits at the top of the oven where heat is highest, while the dense thighs and cavity sit low inside the roasting pan. If you pack the center cavity with cold bread stuffing, the stuffing acts like a giant ice pack. By the time the center of the stuffing finally reaches the mandatory 165°F food-safety mark (to kill any bacteria from raw turkey juices that soaked into the bread), the breast meat has been sitting at 180°F+ for 45 minutes.
