HOORVIA - TRADINGVIEW PINE SCRIPT REFERENCE SHEET

Quick Reference Cheat Sheet · US Letter Printable

Tech & Software

Concept	Pine Script v5 Example	What it does
Version declaration	//@version=5	Must be the first line; v5 is current
Indicator declaration	indicator("My Indicator", overlay=true)	Creates an indicator (overlay = on price chart)
Strategy declaration	strategy("My Strategy", overlay=true)	Creates a backtestable strategy
Input	len = input.int(14, "Length")	User-adjustable setting in script settings
Simple moving average	sma = ta.sma(close, len)	Average of last 'len' closes
Exponential moving average	ema = ta.ema(close, len)	Weighted to recent prices
RSI	rsi = ta.rsi(close, 14)	Relative Strength Index, 0-100
Plot	plot(ema, color=color.blue)	Draws a line on the chart
Plot shape	plotshape(crossover, style=shape.triangleup)	Marks an event on the chart
Background colour	bgcolor(color.new(color.green, 90))	Colours the chart background
Crossover condition	cross = ta.crossover(ema, sma)	True on the bar where EMA crosses above SMA
Strategy long entry	if cross strategy.entry("Long", strategy.long)	Opens a long position on the condition
Strategy close	strategy.close("Long")	Closes the named position
Alert condition	alertcondition(cross, "Cross!", "EMA crossed SMA")	Creates an alert you can set in TradingView
Previous bar value	prevClose = close[1]	[1] = one bar ago, [2] = two bars ago

PRO TIP: Print on US Letter or A4 and keep it beside your keyboard while you write your first Pine scripts, or save it as a PDF via "Save as PDF" in the print dialog (Letter or A4) for a second monitor. A printed reference helps because Pine's function names - ta.sma, ta.ema, ta.crossover - are easy to mistype from memory, and a single typo stops a script compiling. Laminate it if your desk is busy, and annotate it with the indicators you actually use, so the sheet grows into your personal snippet library rather than staying generic.
