HOORVIA - RING SIZING MANDREL GUIDE: PRINTABLE HOW-TO CHART

Quick Reference Cheat Sheet · A4 Printable

Crafting & DIY · Sheet #1

Mandrel Feature	What It Means	How To Use	Watch Out
US size marks	Numbers etched along the mandrel	Slide ring down until it stops	Marks vary by brand - check yours
Tapered cone	Ring stops where it fits snugly	Read the mark at the ring's bottom edge	Read at the widest point of the ring
Wide-band correction	Wide rings fit tighter	Size up 1/4 to 1/2 size for bands over 6 mm	Wide bands cover more skin
Metal vs plastic	Metal is precise, plastic is cheaper	Use metal for final sizing	Plastic flexes and reads large
Grooved mandrel	Grooves hold the ring steady	Rest the ring in a groove to read	For shaping, not measuring
Ring stick vs mandrel	Same tool, different names	A ring stick sizes, a mandrel also shapes	Jewelers use both terms
Sizing beads	Small bumps inside the band	Measure with beads installed	Beads make the ring feel smaller
Comfort fit	Rounded inside edge	Size down 1/4 for comfort fit	Feels looser than flat bands
Half sizes	Marks between whole numbers	Estimate between two marks	Half sizes are standard
Temperature	Fingers swell in heat	Measure at room temperature	Morning fingers run smaller
Knuckle vs base	Knuckle may be wider than base	Size for the knuckle if it is larger	The ring must pass the knuckle
Calibration	Mandrels can wear or vary	Check against a known ring	A worn mandrel reads small

PRO TIP: Read the bottom edge: Read the mark touching the bottom of the ring - reading the top edge gives a size too large.
