HOORVIA - SQL SELECT WHERE CHART: PRINTABLE QUERY GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Clause / Operator	Syntax	What It Does	Example
SELECT	SELECT col1, col2 FROM t	Picks the columns to return	SELECT name, price FROM products
WHERE	WHERE condition	Filters the rows	WHERE price > 10
=	col = value	Exact match	WHERE country = 'USA'
> / <	col > value	Greater / less than	WHERE age > 18
BETWEEN	col BETWEEN a AND b	Range, inclusive of both ends	WHERE price BETWEEN 10 AND 50
IN	col IN (a, b, c)	Matches any value in a list	WHERE city IN ('NYC', 'LA')
LIKE	col LIKE 'pat%'	Pattern match with % and _	WHERE name LIKE 'A%'
AND	cond1 AND cond2	Both conditions must be true	WHERE a = 1 AND b = 2
OR	cond1 OR cond2	Either condition must be true	WHERE a = 1 OR b = 2
NOT	NOT condition	Negates the condition	WHERE NOT active
IS NULL	col IS NULL	Finds missing values	WHERE email IS NULL
ORDER BY	ORDER BY col ASC	Sorts the results	ORDER BY price DESC

PRO TIP: Parenthesize AND with OR: AND binds tighter than OR, so a WHERE with both needs parentheses - otherwise the query returns rows you never asked for.
