HOORVIA - BLENDER SHADER NODES: PRINTABLE MATERIAL GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Node	What It Does	Key Inputs	Common Use
Principled BSDF	All-in-one PBR shader	Base Color, Roughness, Metallic	Almost every material
Image Texture	Loads an image	Image, Vector	Textured surfaces
ColorRamp	Remaps colors and values	Fac, Color stops	Gradients, masks
MixRGB	Blends two colors	Fac, Color1, Color2	Mixing textures
Math	Math operations	Value1, Value2	Scaling, clamping
Bump	Fakes surface detail	Height, Strength	Roughness, grain
Normal Map	Uses a normal map	Color, Strength	Detailed surfaces
Noise Texture	Procedural noise	Scale, Detail	Organic variation
Voronoi Texture	Cell-based pattern	Scale, Feature	Stone, scales
Mapping	Transforms coordinates	Vector, Location, Scale	Placing textures
Texture Coordinate	Generates UVs	-	Object / Generated coords
Material Output	Final material output	Surface, Volume	Every material

PRO TIP: Start with Principled BSDF: One Principled BSDF with a base color and roughness does 90% of materials. Add textures only when the flat color is not enough.
