HOORVIA - HTML META TAGS & CSS SELECTORS CHEAT SHEET: PRINTABLE WEB DEV REFERENCE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Selector / Tag	Syntax / Example	What It Targets	Common Use
charset	<meta charset="UTF-8">	Page text encoding	Stops garbled characters on every page
viewport	<meta name="viewport" content="width=device-width, initial-scale=1.0">	Screen width on mobile	Required for responsive layouts
description	<meta name="description" content="...">	Search result snippet	Click-worthy summary under 160 characters
Open Graph title	<meta property="og:title" content="...">	Link preview headline	Controls the page preview on Facebook and LinkedIn
robots	<meta name="robots" content="index, follow">	Search crawler instructions	noindex the pages you do not want in Google
canonical link	<link rel="canonical" href="...">	Preferred page URL	Prevents duplicate-content penalties
Element selector	p { ... }	All paragraph elements	Base styles for an entire tag type
Class selector	.card { ... }	Elements with class="card"	Reusable styles - the most-used selector
ID selector	#header { ... }	The single #header element	One-off layout hooks; avoid for styling
Attribute selector	input[type="text"] { ... }	Inputs with type="text"	Style by attribute without extra classes
Descendant combinator	nav a { ... }	Any <a> inside <nav>	Scope styles to one component
Child combinator	ul > li { ... }	Direct children only	Avoids styling nested lists by accident

PRO TIP: Order Matters in <head>: Place charset first, then viewport, then title - browsers read your head tags top to bottom.
