HOORVIA - BLENDER MODELING SHORTCUTS CHEAT SHEET: PRINTABLE KEYBOARD REFERENCE

Quick Reference Cheat Sheet · US Letter Printable

Tech & Software · Sheet #1

Tool / Action	Keyboard Shortcut	Mode	What It Does
Switch Object / Edit Mode	Tab	Both	The most-used key in Blender - hops between moving whole objects and editing their mesh
Extrude	E	Edit	Pulls selected faces, edges, or vertices outward into new geometry
Grab / Move	G	Both	Moves the selection; press X, Y, or Z to lock it to one axis
Scale	S	Both	Resizes the selection; add an axis letter to scale one direction only
Rotate	R	Both	Rotates the selection; add an axis letter, type a number for exact degrees
Loop Cut	Ctrl + R	Edit	Adds an edge loop across a mesh - scroll the wheel for multiple cuts
Inset Faces	I	Edit	Pushes selected faces inward to frame panels, windows, and detail
Bevel	Ctrl + B	Edit	Chamfers selected edges; scroll the wheel for more segments
Merge Vertices	M	Edit	Combines selected vertices - At Center or By Distance to clean up
Knife Tool	K	Edit	Cuts freely across the mesh; press Enter to confirm the cut
Fill Faces	F	Edit	Builds a face from the selected edge loop
Add Mesh Object	Shift + A	Object	Opens the Add menu: cubes, cylinders, curves, lights, cameras
Duplicate	Shift + D	Edit	Duplicates the selection; Alt + D makes a linked copy instead

PRO TIP: Lock to an Axis: After G, S, or R, tap X, Y, or Z - one-key precision beats mouse wobble.
