HOORVIA - MUG PRESS SETTINGS CHART: PRINTABLE SUBLIMATION MUG GUIDE

Quick Reference Cheat Sheet · US Letter Printable

Crafting & DIY · Sheet #1

Step	What To Do	Timing	Avoid This Mistake
Preheat the Press	Power on, wait for the green light + ready beep	5-8 min warm-up	Pressing in a cold or still-warming press fades the transfer
Mirror the Design	Toggle Mirror ON in Cricut Design Space	Before cutting	Unmirrored text transfers backwards
Cut the Transfer	Infusible Ink sheet ink-side up on a StandardGrip mat	Fine-point blade, default pressure	Touching the ink surface leaves permanent marks
Weed the Sheet	Bend back and forth to crack along the cut lines	1-2 min	Rushing tears fine design lines
Lint-Roll the Mug	Roll the blank clean before applying the design	About 30 sec	Dust and fibers bake permanently into the design
Apply & Tape	Ink side down on the mug, heat tape on all edges	About 1 min	Shifting while the lever closes causes ghosting
Load the Mug	Handle out, bottom edge flush with your work surface	-	The heat plate must cover the entire design
Press (Automatic)	Push the lever until it clicks, wait for the beep	About 6 min per mug	No temp/time settings - never open the press early
Cool Down	Lift out by the handle, rest on a heat-safe mat	At least 10 min	Peeling while hot smears the ink
Peel & Enjoy	Peel the transfer sheet; finished mugs are dishwasher safe	After cooling	Grabbing the mug body can burn you

PRO TIP: Preheat Fully First: Wait for the green light and beep before loading the mug - a cooling press is the top cause of faded transfers.
