HOORVIA - PROCESS, DISK & NETWORK TOOLS CHART: PRINTABLE SYSTEM MONITORING GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Tool	Platform	What It Monitors	Use It When
Task Manager	Windows	CPU, memory, disk, network use	Finding a runaway process
Resource Monitor	Windows	Per-process disk and network activity	Tracing which app hits the disk
Activity Monitor	Mac	CPU, memory, disk, network by app	Mac slowdowns and memory pressure
top	Mac / Linux	Live CPU and memory by process	Quick terminal health check
htop	Linux	Interactive CPU and memory table	Sorting processes by load
df -h	Mac / Linux	Free space on every mounted disk	Checking a disk is nearly full
du -sh	Mac / Linux	Size of folders and files	Finding what fills the disk
Disk Management	Windows	Partitions, volumes, drive letters	Resizing or formatting a drive
chkdsk	Windows	Disk errors and bad sectors	Fixing a drive that errors
ping	All platforms	Reachability and round-trip time	Testing if a host is online
traceroute	All platforms	Every hop between you and a host	Finding where a connection stalls
netstat / ss	All platforms	Open ports and active connections	Checking what listens on a port

PRO TIP: Start with the process list: A slow computer is almost always one greedy process - check Task Manager or top before touching the disk or network.
