HOORVIA - PULL REQUESTS CHART: PRINTABLE GITHUB PR WORKFLOW GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Step	Command / Action	What It Does	When to Use It
Create a branch	git checkout -b feature/login	Starts isolated work off main	Before changing any code
Push the branch	git push -u origin feature/login	Publishes the branch to GitHub	When the work is ready to share
Open the PR	gh pr create --fill	Opens a pull request from the branch	After the first push
Mark as draft	gh pr create --draft	Opens the PR as not ready for review	Work in progress you want visible
Request a review	gh pr edit --add-reviewer @teammate	Asks a teammate to review	When the PR is ready
Review the diff	Files changed tab on GitHub	Shows every added and removed line	Reviewing someone else's PR
Approve the PR	gh pr review --approve	Records your approval	When the changes look good
Request changes	gh pr review --request-changes	Blocks merge until fixes land	When the code needs work
Resolve conflicts	git rebase main, then push	Replays your branch onto latest main	When main moved ahead of you
Check CI status	gh pr checks	Shows pass or fail for automated tests	Before merging
Merge the PR	gh pr merge --squash	Merges the branch and closes the PR	After approval and green checks
Comment on a line	Add a review comment in the diff	Discusses a specific line of code	When a change needs explanation

PRO TIP: Keep PRs small: One focused change per PR gets reviewed in hours; a 500-line PR sits for days and hides bugs.
