HOORVIA - SQL QUERY CHEAT SHEET: PRINTABLE SELECT & CLAUSE GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Clause	What It Does	Example	Watch Out
SELECT	Chooses the columns to return	SELECT name, price	Lists columns, or * for all
FROM	Names the table to read	FROM products	Every query needs a FROM
WHERE	Filters rows before they return	WHERE price > 10	Runs before GROUP BY
ORDER BY	Sorts the results	ORDER BY price DESC	ASC is the default sort
LIMIT	Caps how many rows return	LIMIT 10	Add OFFSET to page rows
DISTINCT	Removes duplicate rows	SELECT DISTINCT city	Applies to the whole row
JOIN / INNER JOIN	Combines matching rows from two tables	JOIN orders ON users.id = orders.user_id	Returns only matching rows
LEFT JOIN	Keeps all rows from the left table	LEFT JOIN orders ON users.id = orders.user_id	Unmatched rows get NULLs
GROUP BY	Groups rows for totals	GROUP BY category	Pair with COUNT, SUM, AVG
HAVING	Filters grouped results	HAVING COUNT(*) > 5	WHERE cannot filter aggregates
INSERT INTO	Adds new rows	INSERT INTO users (name) VALUES ('Ada')	List columns to stay safe
UPDATE / DELETE	Changes or removes rows	UPDATE users SET active = 0 WHERE id = 1	Always use WHERE - or every row changes

PRO TIP: Always write WHERE with UPDATE and DELETE: A missing WHERE updates or deletes every row in the table. Write the WHERE clause first, test it with SELECT, then run the change.
