HOORVIA - RELATIONS & FILTERS CHART: PRINTABLE DATABASE GUIDE

Quick Reference Cheat Sheet · A4 Printable

Tech & Software · Sheet #1

Feature	What It Does	Example	Watch Out
Relation	Links two databases together	Tasks ? Projects	One relation per link type
Two-way relation	Shows the link on both sides	Project shows its Tasks	Enable 'Show on' for both sides
Rollup	Summarizes related rows	Sum of task hours per project	Needs a relation + a property
Filter: equals	Keeps rows where value matches	Status = Done	Exact match only
Filter: contains	Keeps rows containing text	Name contains 'Q3'	Case-insensitive
Filter: is empty	Keeps rows with no value	Due date is empty	Finds unfinished work
Filter: before / after	Date comparisons	Due before today	Use 'on or before' for deadlines
AND group	All conditions must pass	Status = Done AND Priority = High	Narrows results fast
OR group	Any condition can pass	Priority = High OR Urgent	Widens results
Sort	Orders rows by a property	Sort by Due date, ascending	Sorts apply after filters
Relation + rollup combo	Counts related items	Count of open tasks per project	Use Count, not Sum, for totals
Self-relation	A database linking to itself	Task blocks Task	Great for subtasks

PRO TIP: Build the relation first: A rollup cannot exist without a relation underneath it. Link the databases first, then add the rollup that summarizes the linked rows.
